

HealthConnect Data Warehouse Project Report

1. Introduction

This project builds a healthcare data warehouse using SQL Server.

2. Architecture

CSV → RAW → CLEANSED → REFINED → REPORTING

3. ETL Process

Data is cleaned and transformed across layers.

4. SCD Type 1

Implemented using MERGE statements.

5. Stored Procedures

Automated ETL using procedures and master pipeline.

6. Reporting

Views created for analytics.

7. Conclusion

Pipeline successfully processes healthcare data.
